CompTIA Security+ ce | U.S. Citizen | U.S. Army Veteran

EDUCATION

Bachelor of Science, Cybersecurity — Full Sail University, 3.96 GPA **July 2026**

Associate of Science, Information Technology — Full Sail University, 3.95 GPA **July 2025**

Bachelor of Science, Information Technology — Full Sail University **In Progress**

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS, SQL (PostgreSQL), Bash, PowerShell

Platforms and Tools: Git and GitHub, GitHub Actions, Netlify (serverless functions), Supabase (Postgres, Row Level Security, Edge Functions, Storage), Microsoft Graph API, Plaid API, Claude API, Jinja2, Three.js

Security and Cloud: Least-privilege API permissions, secrets management, Content Security Policy and security headers, Tenable Nessus, OWASP ZAP; AWS (IAM, EC2, S3), Ansible

Microsoft 365: Microsoft Entra ID, Exchange Online, SharePoint, Teams, MFA

EXPERIENCE

IT & TECHNOLOGY SUPPORT SPECIALIST (CONTRACT) **July 2026 – Present**

Continental Investments International Network, Winter Springs, FL

- Built an email-triage automation in Python on the Microsoft Graph API, running on a GitHub Actions schedule for two business mailboxes — an Entra ID app with no send permission, scoped by Exchange permissions, that stops if a run can open any other mailbox.
- Classified mail with the Claude API behind confidence thresholds, kept every action reversible (replies drafted, never sent), and cached a list of already-processed messages so each email is classified once.
- Built and deployed a calendar app for 5–10 users in JavaScript on Supabase, with Row Level Security restricting each user to their own data, a server-side function holding the AI keys, and auto-deploy from GitHub to Netlify.
- Analyzed a client's compromised WordPress site (SEO-spam injection advertising 86 fake sitemaps) and built a static replacement with a Python and Jinja2 build that fails on broken links, a strict Content Security Policy, and HSTS.
- Built a bookkeeping app prototype for four organizations — read-only bank sync through Plaid in serverless functions, per-organization Row Level Security, and offline tests for import and report math.
- Administer Microsoft 365 and Entra ID — accounts, licensing, mailboxes, and MFA — and document procedures and configurations.

COPILOT TUTOR — IT/CYBERSECURITY **November 2025 – July 2026**

Full Sail University, Winter Park, FL

- Coached students one-on-one through technical troubleshooting and translated complex procedures into usable guides.

HUMAN RESOURCES SPECIALIST **August 2018 – December 2022**

U.S. Army, Fort Bragg, NC

- Audited records for 500+ soldiers against AR 600-8, AR 614-200, and AR 635-200 and briefed findings to the Company Commander and First Sergeant.
- Initiated SF-86 security clearance applications for unit personnel; authored and maintained 50+ standing operating procedures.

ACADEMIC PROJECTS — FULL SAIL UNIVERSITY

- Automated AWS provisioning with Ansible playbooks — IAM groups, users, and scoped policies, and EC2 instances launched and terminated declaratively.
- Worked 43 vulnerability remediation tickets from credentialed and non-credentialed Nessus scans across a ten-host, two-site lab, closing 22 with numbered steps and evidence.
- Tested OWASP Juice Shop in Docker and found DOM-based XSS, broken admin authentication, and improper input validation.

CERTIFICATIONS AND LANGUAGES

CompTIA Security+ ce (SY0-701) — August 2026 to August 2029 | Fluent in English and Spanish
